Project Objective

(Questions)

1) Top/Bottom 5 product by Sales/Profit/Quantity Sold.
2) How do sales trends vary over time (daily, monthly, quarterly, annually) ?
3) Show relationship between sales & profit.
4) Compare sales/profit/quantity sold between any two periods selected by the user.
5) Average discount offered in each discount category.
6) Total number of orders.
7) Show Sales/Profit/Discount/Net Sales/All remaining fields for each order that could be filtered using visual filters. (Product/Date/Customer ID/Promotion Categories)
8) Show sales by different cities.

To develop a comprehensive offline stores sales data dashboard that provides real-time insights into key performance metrics and trends, enabling stakeholders to monitor and analyze sales operations effectively.

key Steps for This Project

1. Data Extraction

2.Study Dataset

3.Data cleaning & Modeling

4.Data processing & DAX Queries

5. Dashboard & insights

6. Export & share project

- Import data to Excel Workbook

Power BI

- ## DAX Queries

1. Date Table 1 = CALENDARAUTO()

2. Date Table 1 = CALENDARAUTO()

3. Sum Dim = SUM('Fact Table'[Net Sales])

- ## Custom Column

1. Profit = 0.1 * ["net sales"]

- ## Index Column

2. Order I'D = add index column (From 1)
